

YMCA

We build strong kids,
strong families, strong communities

September 12, 2000

Mr. Fatyol
YMCA of the USA
101 North Wacker Drive
Chicago, IL 60606

Dear Mr. Fatyol:

The Bransby Outdoor YMCA was introduced to the ChlorKing System this past summer. The system was used for three months in a 50 meter outdoor pool. We had over 425 bathers daily including swim teams, swimming lessons and day campers. Our pool maintained excellent chlorine and pH readings throughout the summer. Our bathers never complained of burning eyes or itchy skin, this had been expressed to our staff in previous summers. Everyone seemed to enjoy our "slightly salty" pool water.

Our chemical costs were minimal this summer. We used 4 gallons of muriatic acid and salt. The only time we used liquid bleach was during the start up of the pool prior to the installation of the ChlorKing unit and when our circulation pump went down and we were unable to use the ChlorKing unit. Our pool stayed clear the entire summer without any algae. In previous summers we have had problems with algae and maintaining a constant level of chlorine in the pool.

Our pool chemical costs were reduced by more than half of the cost from previous years. The maintenance of the unit was very easy and user friendly. The unit itself was very compact fitting quite well in our small mechanical room.

The results we received from the ChlorKing system were very impressive. The cost savings from chemicals would definitely be a plus in using the system and help to offset the cost of the unit.

Sincerely,

Debbie Sutton
Branch Director
Bransby Outdoor YMCA Center
